Information Disclosure Statement

The information disclosure statement filed 12/19/2006 fails to comply with 37 CFR 1.98(a)(1), which requires the following: (1) a list of all patents, publications, applications, or other information submitted for consideration by the Office; (2) U.S. patents and U.S. patent application publications listed in a section separately from citations of other documents; (3) the application number of the application in which the information disclosure statement is being submitted on each page of the list; (4) a column that provides a blank space next to each document to be considered, for the examiner's initials; and (5) a heading that clearly indicates that the list is an information disclosure statement. Applicant has not provided a legible copy of each publication or that portion which caused it to be listed.

The information disclosure statement has been placed in the application file, but the information referred to therein has not been considered.

Accordingly, applicant is requested to provide statements of particular relevance of the voluminous prior art, as submitted, as it pertains to the invention as claimed. Currently, the prior art, as filed, does not include any explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art fails to disclose or teach ***the process for manufacturing*** a two layered breast prosthesis comprising providing: (i) a first film envelope configured to define a first interior volume; and (ii) a second film envelope joined to the first film envelope along a common side edge to thereby define a second interior volume wherein the second film envelope and the first film envelope share a common interstitial film wall such that a respective first and a second fill opening extend from the common side edge to the respective first interior volume and second interior volume; and passing a self-shaping dispersion through the first opening wherein air is removed from the self-shaping dispersion prior to passing the self-shaping dispersion through the first fill opening; sealing the first and second fill openings; and curing the elastic material precursor in the second film envelope to provide a two-layer breast prosthesis comprising a cured elastic material layer and an uncured self-shaping layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
